

Pratik Sarkate

Objectives: Detail-oriented data professional with a strong focus on FinTech and Cybersecurity. Passionate about transforming complex financial and blockchain datasets into actionable insights. Eager to leverage Python, data visualization, Web/App development and analytical skills to build secure solutions, optimize risk management, and drive informed decision-making in a dynamic environment.

Education:

- **Master of Computer Applications (MCA)** : Deogiri College, BAMU University, 2026 | Result Awaiting
Current CGPA: 7.21
- **Master of Buisness Administration (MBA)** : Smt. Sindhutai Jadhao College , YCMOU, 2026 | Result Awaiting
Current CGPA: 8.13
- **Bachelor of Computer Applications (BCA)**: Deogiri College, BAMU University, 2023 | Graduated with 68%
- **Higher Secondary Certificate (HSC)**: Maharashtra State Board | Achieved 55%
- **Secondary School Certificate (SSC)**: Maharashtra State Board | Achieved 91%

Certifications:

- **Data Analysis And BI with MS Excel Course**: Travis Cuzick [\[Link\]](#)
- **PHP** : YouAccel Training [\[Link\]](#)
- **Python** : Horizon Tech [\[Link\]](#)
- **Ethical hacking Course** : OCSALY Academy [\[Link\]](#)

Experience:

Software Engineering Trainee | Nascency Infotech (Remote) | *Jan 2026 – May 2026*

- Designed and developed code for ongoing software projects.
- Troubleshoot technical issues and performed testing for software updates.
- Prepared technical presentations and documentation for project managers.
- Successfully tracked and prioritized tasks to meet daily milestones in a remote environment.

Projects:

1. **AuraQuant Pro AI: Algorithmic Trading Terminal** | (*Fintech / Machine Learning Domain*) [\(GitHub Link\)](#)
 - Engineered an institutional-grade algorithmic trading terminal using Python and MetaTrader 5 API for real-time, high-frequency trade execution and limitless backtesting.
 - Integrated Scikit-Learn (K-Means Clustering) to dynamically detect market Support/Resistance, moving away from static technical indicators.
 - Implemented a strict reverse-engineered Kelly Criterion risk-management module to automatically calculate lot sizes and cap maximum financial exposure.
 - Designed a responsive, real-time "Glassmorphism" UI using Streamlit and Plotly to visualize live equity curves and floating PnL.
2. **BTC Transaction Analyser & Dashboard** | (*Blockchain/ Fintech / Web Development Domain*) | [\[GitHub Link\]](#)
 - Developed a lightning-fast, asynchronous backend using FastAPI and httpx to fetch and parse live Bitcoin block data via public APIs.
 - Optimized data ingestion by implementing background threading and SQLite bulk inserts (WAL mode), successfully parsing hundreds of transactions without freezing the main server thread.
 - Designed a Single Page Application (SPA) frontend utilizing Tailwind CSS and Chart.js to track wallet addresses, transaction fees (sats/vB), and visualize blockchain analytics.
3. **Contractors Labour Payment Tracking System** | (*Web Development / Operations*) | [\(GitHub Link\)](#)
 - Developed a centralized web-based payment tracking system for contractors to efficiently manage daily wages, attendance, and financial records.
 - Implemented automated calculation logic for working hours, overtime, and deductions to reduce manual errors in accounting.
 - Designed a secure database architecture to maintain worker profiles and historical payment ledgers.
